

SYSTEM FOR PRESERVING A LIQUID SUBSTANCE IN A FLEXIBLE  
CONTAINER

5

## A B S T R A C T

The invention provides a system for conserving a liquid substance (L) in a flexible receptacle (1), said substance being liable to be degraded and/or contaminated on contact with ambient air, the system being characterized in that it comprises a solid insert (3) whose outer envelope substantially matches the inside shape of the receptacle (1) in which the insert is immersed at least in part, said insert providing protective treatment by making contact with said substance (L) over a large interchange area.
